Gerald J. Rose•Re:: Private Radio Docket page 2 No. 93-61

Suggestions :

on the proposal regarding the cancelling of frequency privileges of a portion of the amateur radio band for the purpose of using these frequency allocations for the Automatic Vehicle Locator(AVL) system.

- 1) Would not pending digital improvements on the cellular phone system for an increase in the number of cellular phones without a corresponding increase of frequency allocations ? Could the then existing cellular equipment be triggered by existing techniques (without the driver's knowledge) to function as an AVL presently under consideration ? More vehicles could certainly be equipped at a fraction of the cost of duplicating much of the operating equipment.
- 2) I am under the impression that of the commercial viability of another device previously proposed and for which some amateur frequency allocations have already been surrendered (220-222 MHz ) has not been proven.
